

Designed Around Your Project

Architect & Designer Edition

Design-led glazing solutions, technical guidance and coordinated delivery for distinctive residential and commercial architecture.

FRAMELITE
VISION ENCASED IN ELITE FRAMES

The right glazing solution begins with the architecture - not with a standard product list

Framelite supports architects and designers in translating design intent into glazing solutions that are visually considered, technically appropriate and practical to deliver. We review the project as a whole, help compare suitable systems and coordinate different product types within one coherent glazing package.

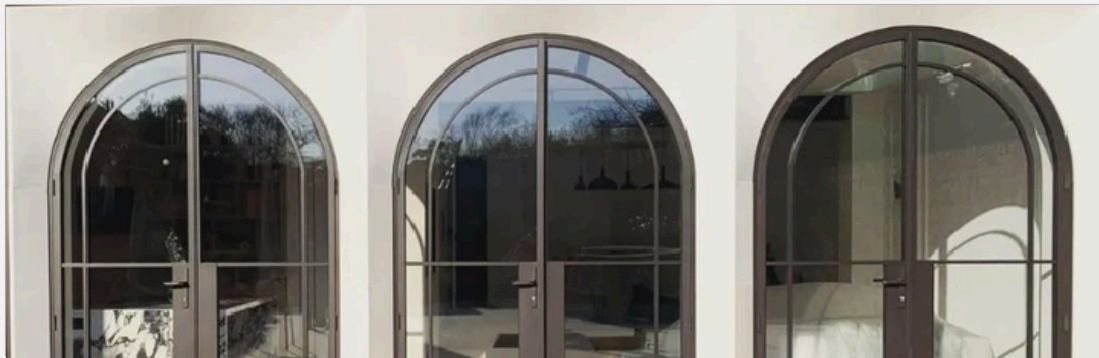

Our role can begin at concept stage or later, when a specification, tender package or developed design requires product selection and technical input.

*We are not tied to one system or manufacturer. Recommendations are shaped around the project's design priorities, required performance, programme and budget.

More
than a
Glazing
Supplier

How We Support the Design Process

1. Early Design Review

Review opening sizes, visual intent, access, interfaces and performance priorities before the solution is fixed.

4. System Selection

Compare suitable aluminium, steel, timber, timber-aluminium, uPVC and architectural glazing options.

2. Specification Support

Provide relevant product information, performance data and supporting documentation for the selected solution.

5. Detail Coordination

Develop drawings and coordinate thresholds, junctions, structure, drainage, fixings and interfaces with the wider design team.

3. Budget Alignment

Identify where design priorities should be protected and where alternative solutions may improve commercial viability.

6. Delivery Support

Maintain direct communication through approvals, manufacture, installation and handover.

GLAZING SOLUTIONS

From minimal-frame sliding doors and architectural glazing to windows, entrance doors and certified fire-resistant systems, we help select the most appropriate solution for each part of the project.

One *Glazing*
Partner.

A carefully
selected range of
systems.

ALUMINIUM SLIDING & FOLDING SYSTEMS

Minimal-frame sliding systems for expansive openings and uninterrupted views, complemented by high-performance lift-and-slide and bi-folding solutions.

ALUMINIUM WINDOWS & DOORS

A wide choice of aluminium windows and doors, with profiles and configurations selected to meet the design, performance and budget requirements of each project.

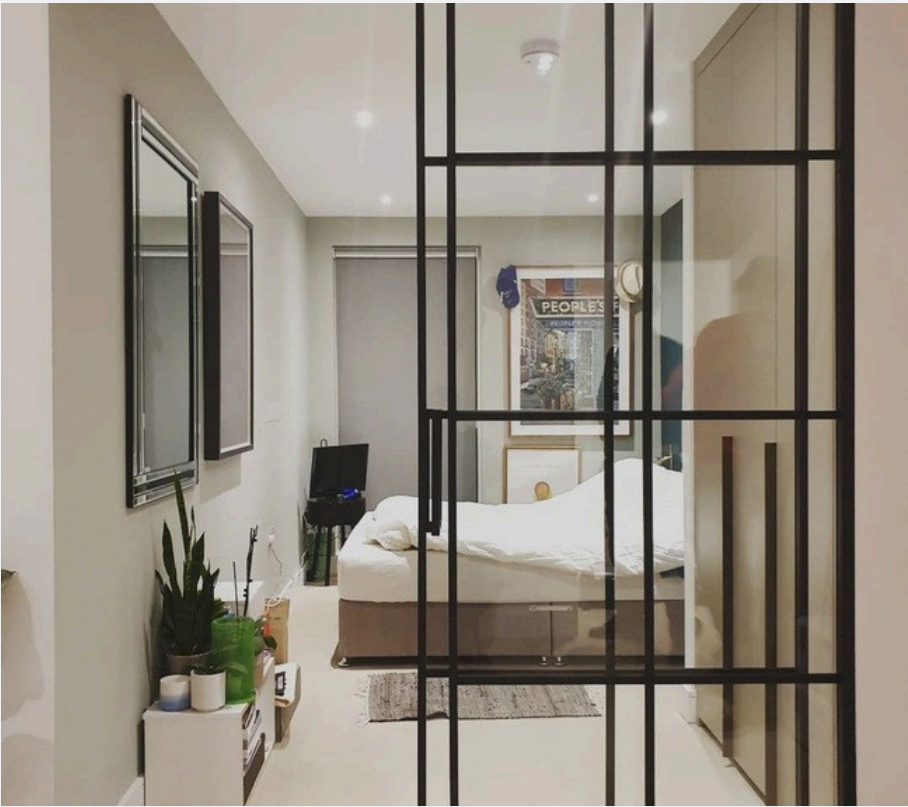

UPVC-ALUMINIUM WINDOWS & DOORS

Reliable, energy-efficient uPVC windows and doors, including aluminium-clad options for projects requiring enhanced external durability and a more architectural finish.

TIMBER & TIMBER-ALUMINIUM SYSTEMS

Timber and Timber-aluminium systems combining the natural warmth of timber with durable external finishes and excellent thermal performance.

STEEL SYSTEMS

Slim steel-framed doors, screens and glazing for internal and external applications, bringing strong architectural character without heavy sightlines.

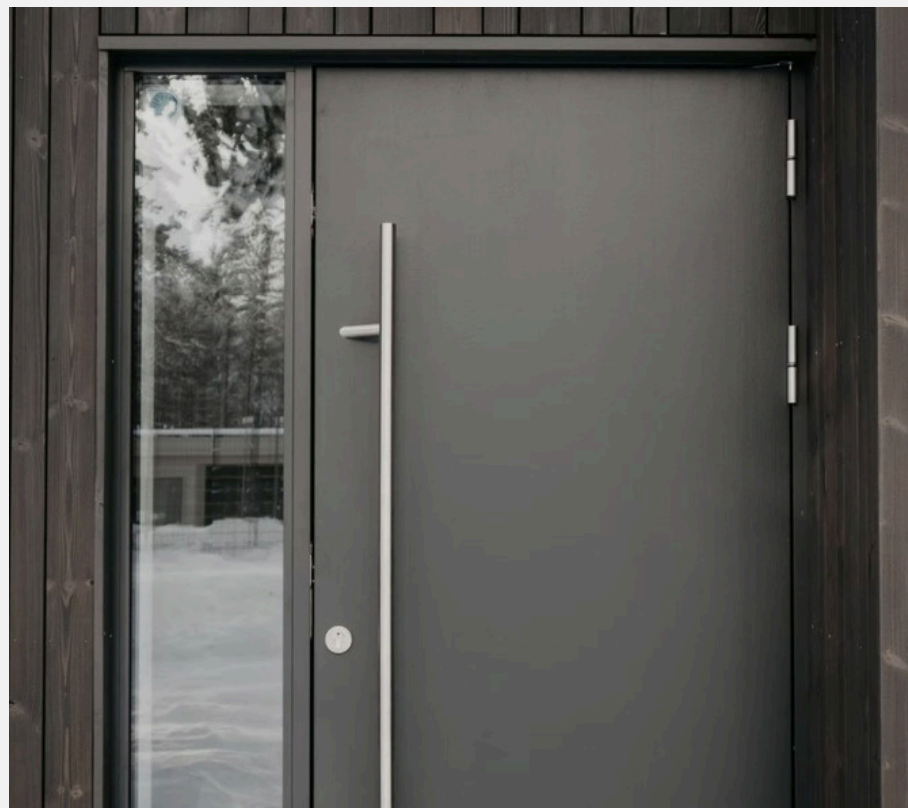

FIRE RESISTANT SYSTEMS

Certified fire-resistant doors, screens and glazed partitions specified to meet the required fire rating while retaining light and visual connection.

ENTRANCE DOORS

Entrance doors designed around the property, with a wide choice of styles, finishes and configurations to suit both contemporary and traditional architecture.

BESPOKE ARCHITECTURAL GLAZING

Bespoke solutions for complex architectural applications, including rooflights, glass roofs, walk-on glass, glazed extensions, oriel windows and balustrades—each developed around the design intent, structure and performance requirements of the project.

Bespoke Does Not Mean Unstructured.

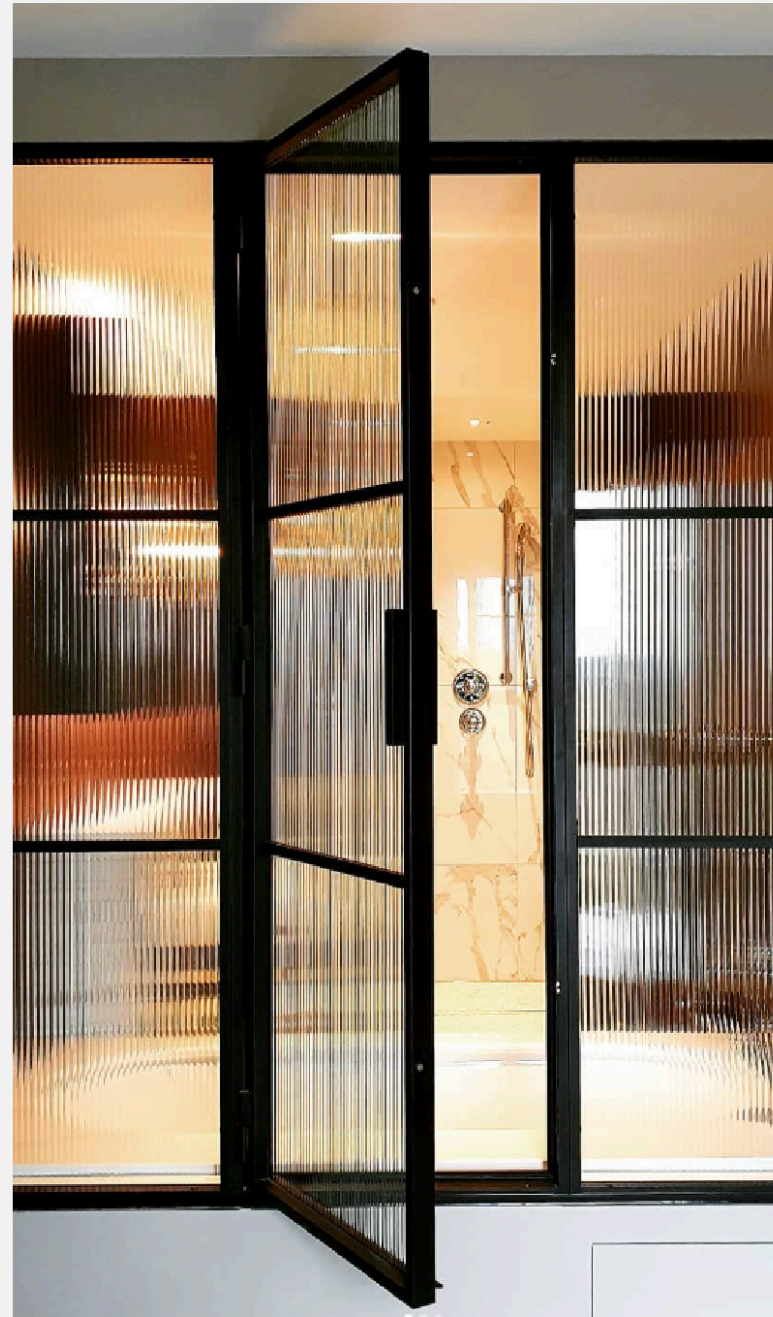

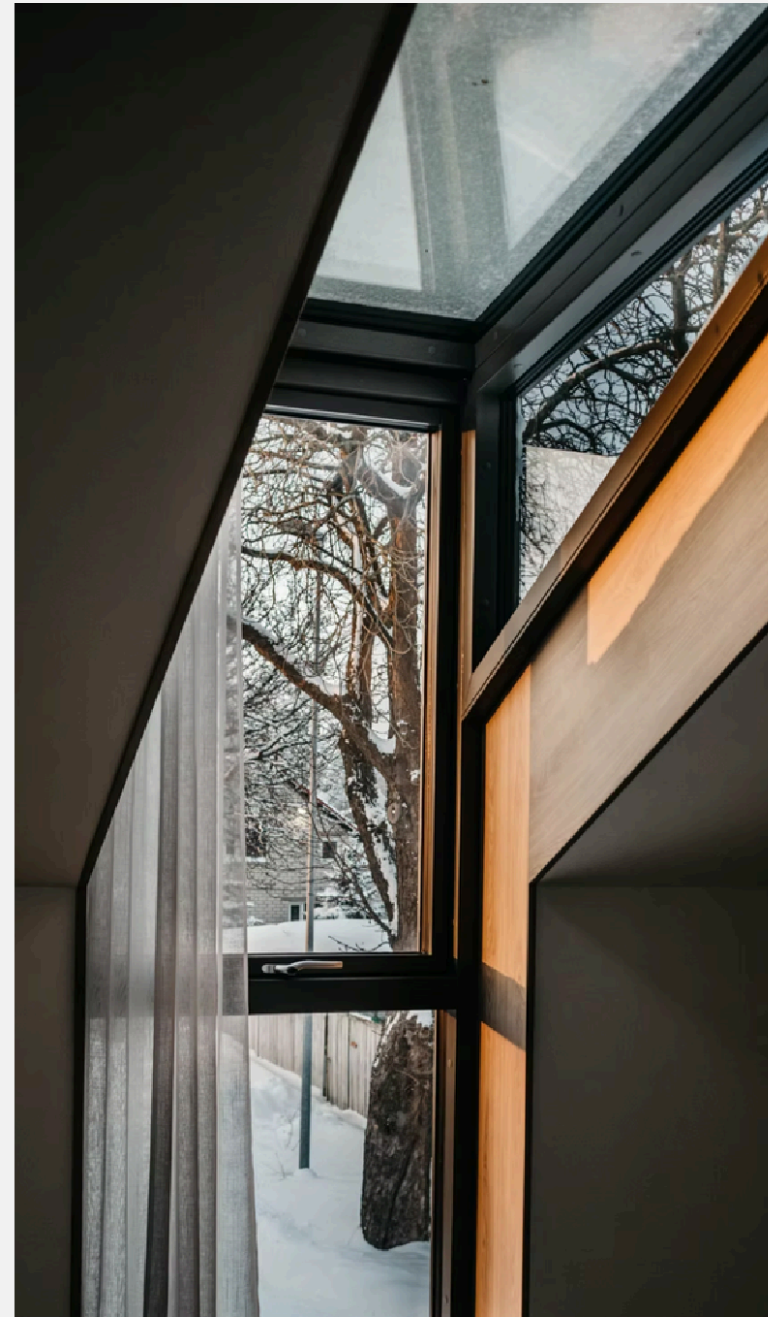

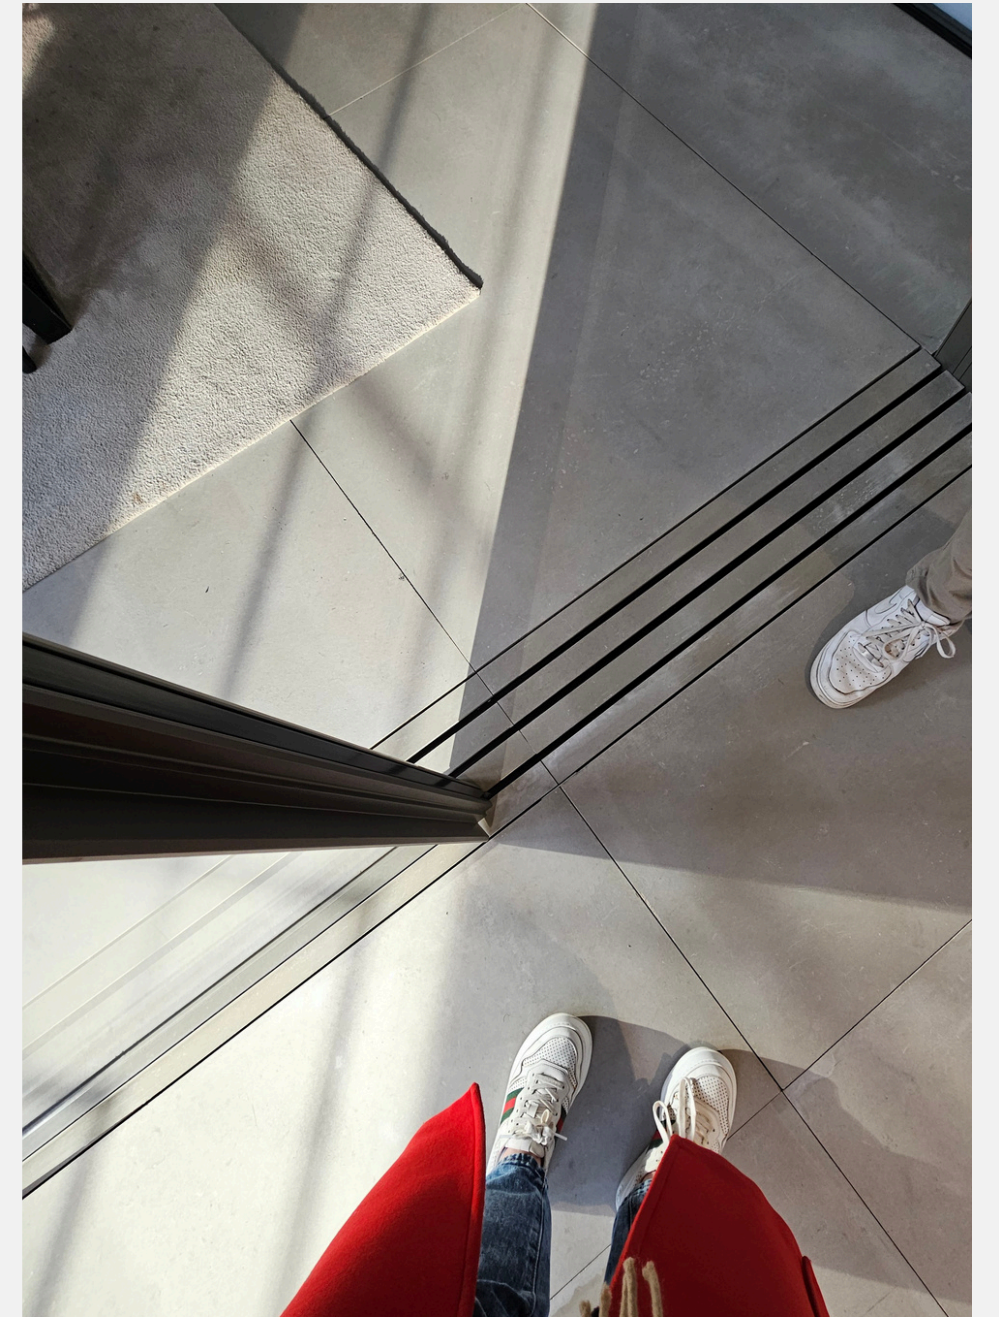

Complex glazing succeeds when architectural ambition is coordinated with system limitations, structure, weathering, safety, thermal performance and buildability. We identify these relationships early and work collaboratively to protect the design while developing a solution that can be manufactured and installed.

- Mixed-system glazing packages coordinated as one scope
- Bespoke configurations developed around the building and intended use

- Performance and certification considered alongside aesthetics
- Direct dialogue with the architect, contractor and relevant project consultants

Why Framelite?

System-Neutral Advice

Solutions selected around the project rather than a single manufacturer's range.

Technical Support

Practical input from initial review through drawings, approvals and detailed coordination.

Bespoke Capability

Support for unusual openings, mixed configurations and project-specific architectural glazing.

Design-Led Thinking

Architectural intent, proportions, sightlines and interfaces remain central to product selection.

One Coordinated Package

Multiple glazing types can be brought together through one responsive project team.

Direct Communication

Easy access by email, phone, WhatsApp or video call when questions need resolving.

A Clear Route From Design to Delivery

1	PROJECT REVIEW	Share drawings, specifications or an initial concept.
2	DESIGN & SYSTEM SELECTION	We review priorities and propose suitable glazing options.
3	QUOTATION & COORDINATION	Scope, commercial position and technical requirements are aligned.
4	DRAWINGS & APPROVAL	Project-specific information is developed for review and sign-off.
5	MANUFACTURE & DELIVERY	Approved products progress through manufacture and planned logistics.
6	INSTALLATION & HANDOVER	Specialist installation is coordinated through completion.

Adrianna Sury | Founder & Sales Director

STRATEGY · SPECIFICATION · CLIENT DIRECTION

Adrianna leads the early project conversation—understanding the architectural intent, identifying suitable glazing approaches and aligning design priorities with performance, budget and programme.

With over a decade of experience in architectural glazing and a BSc (Hons) in Construction Management, she brings clarity to complex product and specification decisions. Her role is to ensure that the proposed glazing package responds to the architecture while remaining commercially considered and practical to deliver.

“Finding the right solution for the architecture.”

From the first project conversation to final installation, clients work directly with the people responsible for shaping and delivering their glazing package.

Two Perspectives. One Coordinated Approach

Lukasz Sury | Co-Founder & Technical Director

TECHNICAL DESIGN · COORDINATION · DELIVERY

Lukasz turns the agreed design direction into a coordinated, buildable solution. His background combines technical design with extensive hands-on site experience, enabling him to develop project drawings, resolve critical interfaces and support each project through approvals, manufacture and specialist installation.

His practical understanding of glazing systems allows potential challenges to be identified early—before they become problems on site.

“Making sure it works in the real world.”
